The present sequence represents a Phaffia derived carotenoid biosynthesis pathway enzyme. The nucleic acid encoding this protein can be used in the novel recombinant DNA of the present invention. The recombinant DNA comprises a transcription promoter operably linked to a downstream sequence to be expressed, where the transcription promoter comprises a region found upstream of the open reading frame (ORP) of a highly expressed Phaffia gene (preferably GAPDH, a ribosomal protein gene, an

enzyme involved in the biosynthesis pathway). The recombinant DNA can be used to transform hosts, preferably Phaffia. These transformed hosts are then used in the recombinant production of GAPDH or an enzyme involved in carotenoid synthesis, preferably astaxanthin. They may also be used to produce a pharmacoutical product. Purified carotenoids can be used as colourants in food and/or feed, and also in cosmetics. (Updated on 17-OCT-2003 to standardise OS field)

```
The invention relates to a novel isolated polypeptide having carotenoids isomerase catalytic activity, comprising a sequence at least 75 % similar to a 615 residue CRIISO amino acid sequence, given in the specification, as determined using the Standard protein-protein BLAST (blastp) software of the NOTBI. The novel polypeptide is useful for producing the all-trans geometric isomers of cis-carotenoids, including phytochee, phytofluene, zeta-carotene, neurosporene and lycopene. The polypeptide enables carotene, neurosporene and lycopene. The polypeptide enables tissues. This sequence represents a tomato protein relating to the carotenoid isomerase catalytic polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NHWTVTTESGREVHARKVIAGCHILTTLDLLGNGGFDRTTLDHWRRKIRVGPGIGAVLRL 324

One polypeptide has the activity of catalyzing a reaction forming geranylgeranyleyrophosphate from farnesylpyrophosphate. Another polypeptide has an activity of catalyzing a reaction forming phytoene from geranylgeranylpyrophosphate. The DMA can be used for the preparation of carotenoid. The present sequence represents an enzyme of carotenoid biosynthetic pathway
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RHSGIIEELGLGAHGLRYIDCDPWAFAPPAPGTDGPGIVF---HRDLD------ATC 112

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  390 RHQVTLWSQWQPYRLSGHRD-WASVAEAEADRIVGB-----MEAFAPGFTDSVLDRFIQ 442
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              394 YENLFVLIPTKASSSIGHGDAYMQSASASVETIASHAINQIATQAGIPDLTDRIVVKRTI 453
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAF67743 to AAF68080 encode the Corynebacterium glutamicum membrane construction and membrane transport (MCT) proteins given in AAB76510 to AAB76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria (e.g. Brevibacterium lactofermentum), the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for transformation. AAF68082 represent sequencing primers which are used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14 AVVIGAGVAGLATSALLARDGWQYTVLEKNTDVGGRAGSLEISGFPGFRWDTGPSWYLMP 73
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        154 GPADFEHRYHSWVGSALGPAHTLRQSAFLR--GRNSSRKV---NNLFYSGATTVPGVGI 507

construction and membrane transport (WCT) proteins given in AAB76510 to AAB76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria (e.g. Brevibacterium lactofermentum), the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for transformation.

AAF68082 and AAF68082 represent sequencing primers which are used in an example from the present invention
                                                                                                        AAF67743 to AAF68080 encode the Corynebacterium glutamicum membrane

Omega-3 fatty acid desaturase, endoplasmic reticulum (BC 1.14.19.-).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta; peprantophyta; Magnoliophyta; eudicotyledons; core eudicots; rosida; eurosids II; Brassicales; Brassicaceae; Brassica.
proposed at the gene level.";
J. Bacteriol. 177:6575-6584(1995).
-!- FUNCTION: Catalyzes the hydroxylation reaction from
beta-carotene to zeaxanthin via beta-cryptoxanthin.
-!- PATHWAY: Carotenoid biosynthesis. Involved in astaxanthin
biosynthetic pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SEQUENCE FROM N.A.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                        -1- PATHWAY: Polyunsaturated fatty acid biosynthesis.
-1- SUBCELLULAR LOCATION: Endoplasmic reticulum.
-1- DOMAIN: The histidine box domains may contain the active site and/or be involved in metal ion binding.
-1- SIMILARITY: Belongs to the fatty acid desaturase family.
important constituents of plant membranes. It is thought to u cytochrome b5 as an electron donor and to act on fatty acids esterified to phosphatidylcholine and, possibly, other phospholipids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               EMBL; L01418; AAA32994.1; -.

Empirical analysis of transcriptional activity in the Arabidopsis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: Microsomal (ER) omega-3 fatty acid desaturase introduces the third double bond in the biosynthesis of 1813 fatty acids, important constituents of plant membranes. It is thought to use cytochrome b5 as an electron donor and to act on fatty acids esterified to phosphatidylcholine and, possibly, other phospholipids.

PATHWAY: Polyunanturated fatty acid biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCE FROM N.A.

-!- FUNCTION: Chloroplast omega-3 fatty acid desaturase introduces the third double bond in the biosynthesis of 16:3 and 18:3 fatty acids, important constituents of plant membranes. It is thought to use ferredoxin as an electron donor and to act on fatty acids seterified to galactolipids, sulfolipids and phosphatidylglycerol. PATHWAY: Polyunsaturated fatty acid biosynthesis.
-!- FATHWAY: POLYUNBARIATHURE.
-!- INDUCTION: BY LOW TEMPERATURE.
-!- DOWAIN: The histidine box domains may contain the active site and/or be involved in metal ion binding.

                                                                                                                                                                                                                           -!- FUNCTION: Chloroplast omega-3 fatty acid desaturase introduces the third double bond in the blosynthesis of 16:3 and 18:3 fatty acids, important constituents of plant membranes. It is thought to use ferredoxin as an electron donor and to act on fatty acids esterified to galactolipids, sulfolipids and phosphatidylglycerol. PATHWAY: Polyunsaturated fatty acid blosynthesis.
-- SUBCELFULAR LOCATION: CHLOROPLAST, MEMBRANE-BOUND (PROBABLE).
-- DOMAIN: The histidine box domains may contain the active site and/or be involved in metal ion binding.

APS.";
Nature 407:81-86[2000].

-!- FUNCTION: Cytochrome O terminal oxidase complex is the component of the aerobic respiratory chain that predominates when cells are grown at high aeration. This ubiquinol oxidase shows proton pump activity across the membrane in addition to the electron transfer (By similarity).
-!- CAPALYTIC ACTIVITY: Ubiquinol-8 + O(2) = Ubiquinone-8 + H(2)O.
-!- COPACTOR: Contains two protoheme IX (heme B55 and B562) and copper B (By similarity).
-!- PATHMAX: Ubiquinol oxidase catalyzes the terminal step in the electron transport chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and copper

CATALYTIC ACTIVITY: Ubiquinol-8 + O(2) = Ubiquinone-8 + H(2)O.
CATALYTIC ACTIVITY: Ubiquinol-8 + O(2) = Ubiquinone-8 + H(2)O.
CORACTOR: Contains two protoheme IX (heme B55 and B562) and
copper B (By similarity).
PATHWAY: Ubiquinol oxidase catalyzes the terminal step in the
electron transport chain.
SUBCELULAR LOCATION: Integral membrane protein (By similarity).
SIMILARITY: Belongs to the heme-copper respiratory oxidase family.
                                                                                                              Q8K994;

-!- FUNCTION: Cytochrome O terminal oxidase complex is the component of the aerobic respiratory chain that predominates when cells are grown at high aeration. This ubiquinal oxidase shows proton pump activity, across the membrane in addition to the electron transfer
                                                                                                                                                                                                                 Buchnera aphidicola (subsp. Schizaphis graminum).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-UV-/83-705A-6

Sequence 6, Application US/07783705A

Patent No. 542939

GENERAL INFORMATION:
APPLICANT: Misawa, No. 5429939iniko
APPLICANT: Kobayashi, Kazuo
APPLICANT: Yamano, Shigeyuki
TITLE OF INVENTION: SYNTHESIS OF CAROTENOIDS
TITLE OF INVENTION: SYNTHESIS OF CAROTENOIDS
TITLE OF INVENTION: SYNTHESIS OF CAROTENOIDS
TITLE OF INVENTION: SYNTHESIS OF CAROTENOIDS
TITLE OF INVENTION: SYNTHESIS OF CAROTENOIDS
TITLE OF INVENTION: SYNTHESIS OF CAROTENOIDS
TITLE OF INVENTION: SYNTHESIS OF CAROTENOIDS
TITLE OF INVENTION: SYNTHESIS OF CAROTENOIDS
TITLE OF INVENTION: SYNTHESIS OF CAROTENOIDS
TITLE OF INVENTION SYNTHESIS OF CAROTENOIDS
TOWNTER READABLE FORM:
MEDIUCATION TYPE: Diskette, 3.50 inch, 720KD storage
COMPUTER: IRM PC COMPATIBLE
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: NS-DISKET OF CAROTENOIDS
TILING DATE: 19911023
CLASSIPICATION NUMBER: US 07/519,011
FILING DATE: 1-1940-1959
ATTORNEY/AGRIT INFORMATION:
REGISTRATION NUMBER: US 07/519,011

Patent No. 5744341
GENERAL INFORMATION:
APPLICANT: CUN, ZAIREN
TITLE OF INVENTION: GENES OF CAROTENOID BIOSYNTHESIS AND
TITLE OF INVENTION: METABOLISM AND A SYSTEM FOR SCREENING SUCH GENES
NUMBER OF SEQUENCES: 21
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0; Gaps
